Changes

Some changes that I made to the website that are different from the prototype is that I got rid of recommendations on the cart page since it was too much information and hard to implement with my current knowledge. Also instead of underlining the page that the user is on the page that they are on will be a different color. This helps the user recognize it faster and it adds to the design of the webpage. Lastly, the cart will have a number next to it signalling how many items are in the cart.

Then for my design choice, I stayed with the center column minimalistic view so that the whitespace can highlight the items in the center of the page. There aren't many things on the page as it will crowd the page. My target audience doesn't really have time to go through every piece of information so they would like the page to have as little things as possible. They will most likely already know what they want and want to be ready for checkout in a couple of clicks so all pages are linked together through a minimum of two clicks.
